Danny Seth

Alzheimer's Blood Test | CEO Redwood Bio | Harvard Business School | MIT
Santa Cruz, California, United States

Summary

Redwood Bio is a diagnostic company that aims to revolutionize Alzheimer's disease detection and prevention with a simple blood test. As the CEO and co-founder, I lead the vision, strategy, and execution of our innovative technology, which can diagnose Alzheimer's 15 years before symptoms appear.

Our technology is based on years of patient data testing and research, and has received \$5 million in grants from prestigious institutions. We are passionate about making a positive impact on millions of lives and transforming the field of neurodegenerative diseases.

I have a strong background in finance and engineering, with an MBA from Harvard Business School and a degree in Electrical Engineering from MIT. I have also worked as a portfolio manager at PIMCO. I leverage my diverse skills and knowledge to drive strategic decisions and growth opportunities for Redwood Bio.
